To whom it may concern:

I am completely opposed to the NextNav petition. NextNav has no plans, written or otherwise to preserve Amateur Radio use of the 900mhz band. The Amateur Radio community use this band for experimentation and communication.

We run very sensitive receivers in the band (squelch opens at -120 dBm or 0.22 uV) and we use the band as a backbone for point to point repeater linking, in-band repeaters, moon bounce, as a critical experimental band, a quiet band to use for emergency and disaster communications, etc.
